### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:
2. The closest prior art of record does not teach, suggest or disclose a steam on demand generator comprising a stainless steel cup and cap assembly with a hollow cone spray nozzle arranged in the cap for supplying water to the surface of the cup as set forth in independent claims 1 and 6, wherein the generator further comprises a heating device brazed to the outside surface of the stainless steel thin side wall of the cup, and a temperature sensor located inside the cup and having an end portion brazed to the inside surface of the stainless steel thin side wall of the cup.
3. Regarding independent claim 18, the closest prior art of record does not teach, suggest or disclose a steam on demand generator comprising a stainless steel cup and cap assembly with a hollow cone spray nozzle arranged in the cap for supplying water to the surface of the cup as set forth in independent claim 18, wherein the generator further comprises a heating device and a temperature sensor brazed to the cup, and wherein the temperature sensor is a thermocouple that has an end portion of said thermocouple brazed on an inside wall of the cup so that at least a portion of the tip of the thermocouple directly contacts the inside wall and a portion of the tip remains exposed so that the inside wall temperature and temperature of the water inside the cup can be sensed.
4. Schraner (U.S. Patent No. 2,490,547) discloses a steam on demand generator with a thin walled cup and cap assembly made from a metal as shown in Figure 1. The reference also discloses a hollow cone spray nozzle (4) located in the cap of the

generator as well as a heater (14) located inside the cup. The reference does not disclose or suggest; a heater brazed to the outside of the cup and cap assembly, the cup and cap assembly comprising stainless steel, or a temperature sensor.

5. Glucksman (U.S. Publication No. 2004/004299) discloses a steam on demand generator comprising a cup and cap assembly including a heater (66) brazed to the inside of the cup and cap assembly, and a temperature sensor (81) located on the inside of the cup and cap assembly. The reference does not disclose or suggest; the cup and cap assembly comprising stainless steel, a hollow cone spray nozzle, a heater brazed on the outside of the cup, or a temperature sensor comprising an end portion brazed to the inside surface of the cup.

6. Iguchi (U.S. Patent No. 5,350,901) discloses a stainless steel steam on demand generator (column 2, lines 15-25; column 4, lines 10-20), but does not disclose or suggest that the generator comprises thin walls with a hollow cone spray nozzle located in a cap portion of the generator. The reference also does not disclose or suggest a heater brazed to the outside surface of a cup assembly or a temperature sensor brazed to an inside surface of a cup assembly.

7. Newman (U.S. Patent No. 5,271,893) discloses a steam on demand generator comprising a temperature sensor located at an inside wall of said generator as shown in Figures 1 and 2. Newman does not disclose or suggest that said temperature sensor is brazed to the inside wall of said generator, or that a heater is brazed to an outside wall of the generator. The reference also does not disclose that the generator comprises a stainless steel cup and cap assembly or a hollow cone spray nozzle located in a cap.

8. Therefore, the closest prior art of record does not teach, disclose or suggest a steam on demand generator comprising a stainless steel cup and cap assembly with a hollow cone spray nozzle located in the cap as set forth in independent claims 1 and 6, as well as a heater brazed to the outside surface of the cup and a temperature sensor brazed to the inside surface of the cup. With regard to claim 18, the closest prior art of record does not teach, disclose or suggest a steam on demand generator comprising a stainless steel cup and cap assembly with a hollow cone spray nozzle located in the cap as set forth in independent claim 18, as well as a heater brazed to the cup and a thermocouple brazed to the inside of the cup wherein a portion contacts the surface of the cup and a portion remains exposed so that the wall temperature and the temperature of the water inside the cup can be sensed. Since claims 3, 5 and 7 are dependent from allowable claims 1 and 6, then they are allowable as well.
9. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
